

Permitus

On-line Contractors Pass and Permit to Work issuing system

inductus
VIRTUALLY SOLVED

Key Benefits

- Establishes “Best Practise” by controlling access of contractors to your locations.
- Permitus reduces your corporate financial risk by ensuring that all contractors meet your compliance requirements.
- Generates essential documentation with minimal paperwork.
- Issues “Passes” and “Permits to Work” instantly at run time.
- Processes local and group wide contractors.

ermitus

On-line Contractors Pass and Permit to Work issuing system

inductus
VIRTUALLY SOLVED

Overview

Permitus is an on-line contractor "Pass" and "Permit to Work" issuing system. While allowing some limited independence for your local sites to appoint local contractors, it will ensure that all contractors meet your corporate minimum compliance levels. Permitus is fully customisable with your own generated question bank in addition to the defaults.

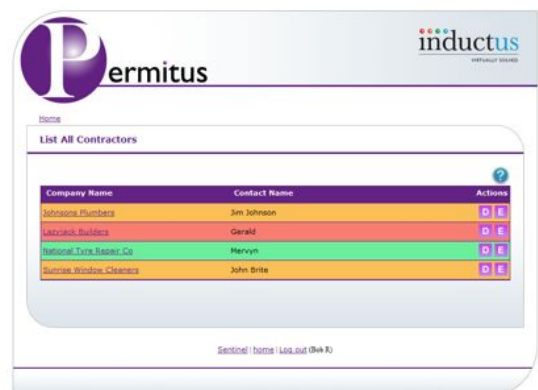

How it works

When a contractor arrives at a location the authorised user will run through a process to issue a Pass, and "Permit to Work" if appropriate, to the contractor. There are 2 different procedures, one for a local contractor and the other for a group wide authorised contractor. By following a simple on-line procedure the documentation can be issued to authorise the work on site providing the minimum criteria is met. Failure to meet the minimum requirement will mean a pass/Permit to Work cannot be issued because of non-compliance.

Additional Features

- User-friendly "New Contractor" wizard.
- Customisable question bank with default set.
- Blacklist feature to enable head office to ensure non-compliant contractors are not used
- Head Office suspension of authorisations to work
- Head Office notification of 3 local authorised passes for group consideration.
